Over-the-counter medicine safety for grades 5 to 8

Research shows that children begin to self-medicate at around age 11 — in fifth and sixth grades. This free multimedia educational program is designed to build children’s knowledge about over-the-counter medicine safety and encourage responsible behavior. The program features resources for teachers, school nurses and families, as well as a variety of games, a bonus trivia quiz, and videos in English and Spanish.

Toxic Trivia for Teens: A Not-So-Trivial Quiz Game

The Kahoot game “Toxic Trivia for Teens 2: Another Not-So-Trivial Quiz Game” was designed by poison center educators to help students learn about poisoning prevention concepts relevant to teens, including, but not limited to:

- Scenarios that may lead to teen poisoning
- How substance abuse affects the body
- How to take medicine safely
- Preventing childhood poisoning (for babysitters, older siblings and future parents)

The program also addresses what to do if a poisoning is suspected. **Note:** Adults may enjoy and learn something from this Kahoot as well!
